

# TCO2A(-D)

CO<sub>2</sub> and temperature transmitters

A range of room transmitters for measuring carbon dioxide concentration in indoor environments. The transmitter has a built-in CO<sub>2</sub> sensor with working range 0...2000 ppm and output signal 0...10 V, as well as built-in 0...10 V temperature sensor (working range 0...50°C).

- Output signal CO<sub>2</sub>, 0...10 V DC referring to 0...2000 ppm
- Temperature sensor, 0...10 V DC referring to 0...50°C
- CO<sub>2</sub> concentration, 0...2000 ppm
- Temperature, 0...50°C
- Good long-term stability

## Function

Transmitters with automatic calibration combining measurement of CO<sub>2</sub> level and temperature in the same casing. The sensors are mounted in the cover-part of the casing. The cover is easy to detach from the back by means of snap-in grips and detachable terminals. This makes mounting easier. Furthermore, no cables have to be disconnected, simplifying service and replacement. The transmitters are intended for wall mounting in HVAC systems.

## CO<sub>2</sub> sensor

The CO<sub>2</sub> concentration is measured using infrared light, a technique that measures the absorption in gases. It has a reference measuring system that compensates values in relation to changes in light intensity. This technique has many advantages:

- Very high+ accuracy
- Exact identification of the detected gas
- Low risk of contamination
- Short response time
- Excellent long-term stability

## Automatic Calibration

The transmitters have automatic calibration, which means that manual recalibration is not required during the lifetime of the transmitter.

## Temperature sensors

The unit has built-in 0...10 V temperature sensor, working range 0...50°C.

**Note!** The sensors are not compensated for internal warm-up. The passive temperature output must be calibrated with a controller.

## Supply voltage

The transmitter uses a supply voltage of 24 V AC ±10 %, 50...60 Hz or 15...35 V DC. It automatically detects and adapts to the supply voltage connected.

## Display (-D models)

Display models have an LCD display showing carbon dioxide concentration and temperature in an alternating series.

## Applications

The carbon dioxide level gives a direct indication of the indoor air quality. This information can be used to control ventilation with high precision and improve the air quality. By increasing the supply air only when necessary, it is possible to minimise energy costs. The transmitter is especially suited for environ-
